Fasciotens course

Fasciotens

The innovative fasciotens products use a patented, tissue-sparing technique to apply vertical traction to the fascia of the abdominal wall, creating the conditions for direct abdominal wall closure in open abdomens, complex hernias, as well as neonatal abdominal wall defects.

What and why?

fasciotens®Abdomen uses vertical fascial traction to keep the fascia of the open abdomen under tension, thus counteracting the otherwise almost inevitable fascial retraction in open abdomens of adults and newborns. As vertical traction does not only stop the abdominal wall from retracting, but can also be used to regain fascia, fasciotens®Hernia was developed to facilitate the closure of complex hernias.

The initiative

The AWRSC has partnered with FASCIOTENS to bring in the concept, technology, technique, practice protocols and knowledge sharing of this innovative device. The founders, inventors, technical experts, clinical scientists and AWR Surgeons are here to help you to learn this upcoming science.

Course Highlights

- Concept of fascial traction
- Clinical scenarios where FT is useful
- Practical application of the devices
- Overview of clinical experience and outcomes
- Live surgery

Fasciotens course

Final Program

- 0830 Welcome – **Vivek Bindal**
0840 Principle and history of vertical traction in different indications – **Gereon Lill**

FT Hernia

- 0900 Challenges in closure of complex hernias – **Todd Heniford**
0920 Evolution of Intraoperative Fascial Traction IFT – **Thomas Aufenberg**
0935 Results of open IFT – **Henning Niebuhr**
0950 IFT in robotic surgery – **Bob Bloemendaal**
1005 Laparoscopic IFT in E TEP – **B Ramana**
1020 Q&A
1030 Tea

FT Abdomen

- 1045 Evolution of open abdomen management – **B Ramana**
1100 Challenges in Open Abdomen treatment – **Heather Bougard**
1115 My worst nightmares in open abdomen treatment – **Gereon Lill**
1130 Open abdomen in newborns – **Thomas Aufenberg**
1145 Q&A

Practical training

- 1210 Hands on the systems (**Station 1 Hernia; Station 2 – Abdomen**)
1240 Lunch
1315 Live surgeries – **Open/Robotic AWR using Fasciotens**
1700 Concluding session: How to start using FT in practice
B Ramana/Gereon Lill/N Bharech/Thomas Aufenberg
